Example of an Educational Supervisor Report for Internal Medicine year 2 (IMY2)

This example focuses on the IM clinical CiPs and other sections of the ESR have not been included

Trainee Name	Dr X
Trainee GMC number	123456
Specialty	Internal Medicine
Supervisor Name	Dr Y
Period covered by this report	03/08/2019 – 30/06/2020
Grade	IMY2

Clinical CiPs

Please rate the trainee's progress against each CiP using the levels below. **Detailed comments must be given to support any entrustment decision that is at a lower level than that expected for a trainee at this stage of training** – please refer to the grid of expected levels in the ARCP decision aid.

Detailed comments must be given to support entrustment decisions that are at or above the level expected. Comments are encouraged (but not mandated) for all assessments especially to celebrate excellence in those performing above expectation.

Level descriptors for clinical CiPs

Level 1: Entrusted to observe only - no provision of clinical care

Level 2: Entrusted to act with direct supervision: The trainee may provide clinical care, but the supervising physician is physically within the hospital or other site of patient care and is immediately available if required to provide direct bedside supervision

Level 3: Entrusted to act with indirect supervision: The trainee may provide clinical care when the supervising physician is not physically present within the hospital or other site of patient care, but is available by means of telephone and/or electronic media to provide advice, and can attend at the bedside if required to provide direct supervision **Level 4: Entrusted to act unsupervised**

Clinical CiPs

1. Managing an acute unselected take

- Demonstrates professional behaviour with regard to patients, carers, colleagues and others
- Delivers patient centred care including shared decision making
- Takes a relevant patient history including patient symptoms, concerns, priorities and preferences
- Performs accurate clinical examinations
- Shows appropriate clinical reasoning by analysing physical and psychological findings
- Formulates an appropriate differential diagnosis
- Formulates an appropriate diagnostic and management plan, taking into account patient preferences, and the urgency required
- Explains clinical reasoning behind diagnostic and clinical management decisions to patients/carers/guardians and

other colleagues

2. Managing an acute specialty-related take

- Demonstrates professional behaviour with regard to patients, carers, colleagues and others
- Delivers patient centred care including shared decision making
- Takes a relevant patient history including patient symptoms, concerns, priorities and preferences
- Performs accurate clinical examinations
- Shows appropriate clinical reasoning by analysing physical and psychological findings
- Formulates an appropriate differential diagnosis
- Formulates an appropriate diagnostic and management plan, taking into account patient preferences, and the urgency required
- Explains clinical reasoning behind diagnostic and clinical management decisions to patients/carers/guardians and other colleagues
- Appropriately selects, manages and interprets investigations
- Demonstrates appropriate continuing management of acute medical illness in patients admitted to hospital on an acute unselected take or selected take

Dr X has not had to manage a specific specialty on-call but has had to manage patients admitted to specialty wards in all three placements.

Information from three MCR indicate that he makes good clinical judgements of these patients. This includes picking up management plans initiated on admission and modifying them when necessary before and with the support of senior advice.

There are two mini-CEXs that were undertaken (1/11/2019, 2/2/2020) when he was observed picking up specialty patients. Both supported the above statement. It was commented that he was able to identify additional investigation needed from a specialty perspective.

3. Providing continuity of care to medical in-patients, including management of comorbidities and cognitive impairment

- Demonstrates professional behaviour with regard to patients, carers, colleagues and others
- Delivers patient centred care including shared decision making
- Demonstrates effective consultation skills
- Formulates an appropriate diagnostic and management plan, taking into account patient preferences, and the urgency required
- Explains clinical reasoning behind diagnostic and clinical management decisions to patients/carers/guardians and other colleagues
- Demonstrates appropriate continuing management of acute medical illness in patients admitted to hospital on an acute unselected take or selected take
- Recognises need to liaise with specialty services and refers where appropriate Appropriately manages comorbidities in medial inpatients (unselected take, selected acute take or specialty admissions)
- Demonstrates awareness of the quality of patient experience

From my own direct observations and comments recorded in all MCRs Dr X demonstrates a good degree of ability in managing a range of inpatient conditions that cover all the attributes required at this stage of training.

At times when he is the most senior doctor on the ward, the ward runs well. Patients are seen and managed appropriately and ward rounds are well prepared and presented on. He also demonstrates a good ability to organise more junior colleagues.

One MCR (1/11/2019) states specifically good participation in board rounds.

No issues have been identified in the management of patients and indeed from all MCRs there is evidence that this is done well. He is able to explain his clinical reasoning and defend decisions. He frequently asks for feedback and acts on it.

For improvement; presentation of cases could be more focused (MCR 2/2/2020, 5/4/2020 and my own observations).

4. Managing patients in an outpatient clinic, ambulatory or community setting (including management of long term conditions)

- Demonstrates professional behaviour with regard to patients, carers, colleagues and others
- Delivers patient centred care including shared decision making
- Demonstrates effective consultation skills
- Formulates an appropriate diagnostic and management plan, taking into account patient preferences
- Explains clinical reasoning behind diagnostic and clinical management decisions to patients/carers/guardians and other colleagues
- Appropriately manages comorbidities in outpatient clinic, ambulatory or community setting
- Demonstrates awareness of the quality of patient experience

Dr X's logbook of clinic attendance demonstrates 22 clinics attended in a variety of specialties and settings.

There are a number of clinic letters in the Evidence Library which show a developing style of letter writing but that more structure is needed, e.g., highlighting GP actions needed. More practice and feedback is needed.

The mini-CEX (23/11/2019. 2/2/2020) both indicate a need to be more mindful of the time constraints of clinic work and this needs to be worked on in future. Dr X also needs to develop techniques to reinforce treatment/investigation plans to the patient and give the patient/relatives the opportunity to ask questions.

The CbDs (12/1/2020, 2/2/2020) emphasize a need for more structure in treatment/investigation plans.

The MCR (14/2/2020) this was done in an AEC setting and also emphasizes the above points

5. Managing medical problems in patients in other specialties and special cases

- Demonstrates effective consultation skills (including when in challenging circumstances)
- Demonstrates management of medical problems in inpatients under the care of other specialties
- Demonstrates appropriate and timely liaison with other medical specialty services when required

Level 1	Level 2	Level 3	Level 4
	V		

Please provide comments to justify your rating and identify any areas of concern or excellence

Dr X has been seeing patients referred to respiratory medicine (placement 2) ahead of the senior opinion on the patient. The MCR (3/3/2020) comments that he made a good assessment of the patients and was able (with prompting to address the issues raised by the referring team. He presented the cases well to the consultant who later reviewed the patient and liaised well with the referring team.

He has also seen patients in outpatients referred for a respiratory review ahead of surgery. Feedback (CbD - 20/1/2020) indicates that this was done well.

6. Managing an MDT including discharge planning

- Applies management and team working skills appropriately, including influencing, negotiating, continuously reassessing priorities and effectively managing complex, dynamic situations
- Ensures continuity and coordination of patient care through the appropriate transfer of information demonstrating safe and effective handover
- Effectively estimates length of stay
- Delivers patient centred care including shared decision making
- Identifies appropriate discharge plan
- Recognises the importance of prompt and accurate information sharing with primary care team following hospital discharge

Level 1	Level 2	Level 3	Level 4

Please provide comments to justify your rating and identify any areas of concern or excellence

In placement 2 (respiratory) Dr X presented patients at the ILD and cancer MDT. Feedback (in MCR 3/3/2020) indicates that this was done well.

He also engages well with the MDT during Board Rounds (own observation) and takes the opinions of other professionals into account as part of discharge planning.

7. Delivering effective resuscitation and managing the deteriorating patient

- Demonstrates prompt assessment of the acutely deteriorating patient, including those who are shocked or unconscious
- Demonstrates the professional requirements and legal processes associated with consent for resuscitation

• Participates effectively in decision making with regard to resuscitation decisions, including decisions not to attempt					
 CPR, and involves patients and their families Demonstrates competence in carrying out resuscitation
